

## **Absolute Technology Cures Wi-Fi Woes with New iPhone 5 Case**

*LINKASE Improves Wi-Fi Signals By Up To 50 Percent*

**NEW YORK, NY (April 11, 2013)** – Following its U.S. debut in March, [Absolute Technology](#), a company that engineers solutions to enhance users' everyday mobile device experience, will showcase its [LINKASE for iPhone 5](#) at Pepcom's DigitalFocus event for moms, dads and grads. Absolute Technology has created a new category of performance-enhancing iPhone accessories with the launch of LINKASE, providing consumers with a protective case for the iPhone 5 that utilizes a built-in antenna certified to enhance Wi-Fi signals by up to 50 percent.

"Wi-Fi has become an essential part of a consumer's everyday iPhone experience, but getting a strong enough signal when you need it can be extremely challenging," said Alan Teng, general manager, Absolute Technology. "Whether in a dead zone at home or fighting for a signal in a crowded airport terminal, LINKASE users can enjoy the benefits of a Wi-Fi signal that is twice as strong or more, making their web searching, video viewing and other online tasks a breeze."

LINKASE's Wi-Fi boosting power is fueled by EMW (electromagnetic waveguide), an advanced, signal-enhancing technology that functions through the protective case's proprietary sliding antenna. LINKASE harnesses the signal of the iPhone 5's built-in antenna and dramatically enhances performance, improving a user's Wi-Fi signal by up to 50 percent. iPhone 5 users can simply slide out LINKASE's antenna to experience faster Web browsing, upload, and download speeds.

LINKASE's sleek and protective design uses a durable polycarbonate material, while shock absorbent rubber shields the phone's screen. Its multi-layered and non-slip leather coating provides a smooth touch, ensuring the case is just as stylish as it is functional.

Available for purchase through [Amazon.com](#) with expanded retail availability expected in the next few months, LINKASE retails for \$49.95. The product is currently available in five colors—Coal Black, Ash Gray, Frost White, Chili Red and Antarctic Blue—and each LINKASE comes with an extra EMW element in a complementary color. Users can personalize their case by creating their own color combinations with the interchangeable EMW elements.
